3D Printing Service

Located in Toronto, Canada's largest and most diverse city, we offer fast, accurate 3D Printing to a wide variety of customers in forward-thinking industries such as architecture, consumer products, automotive, and technology. Hot Pop Factory specializes in creating high-quality scaled models, hardware enclosures, parts & components, awards, art and sculptures, as well as fashion accessories.

3D printing is a fantastic way to make totally custom designs that could not easily be made with traditional means of manufacturing. With a variety of 3D printing capabilities to offer, our service features include:

Materials that fit your project

- ✓ FDM PLA Plastic
- ✓ FDM ABS Plastic
- ✓ SLS Nylon

Fast turnaround

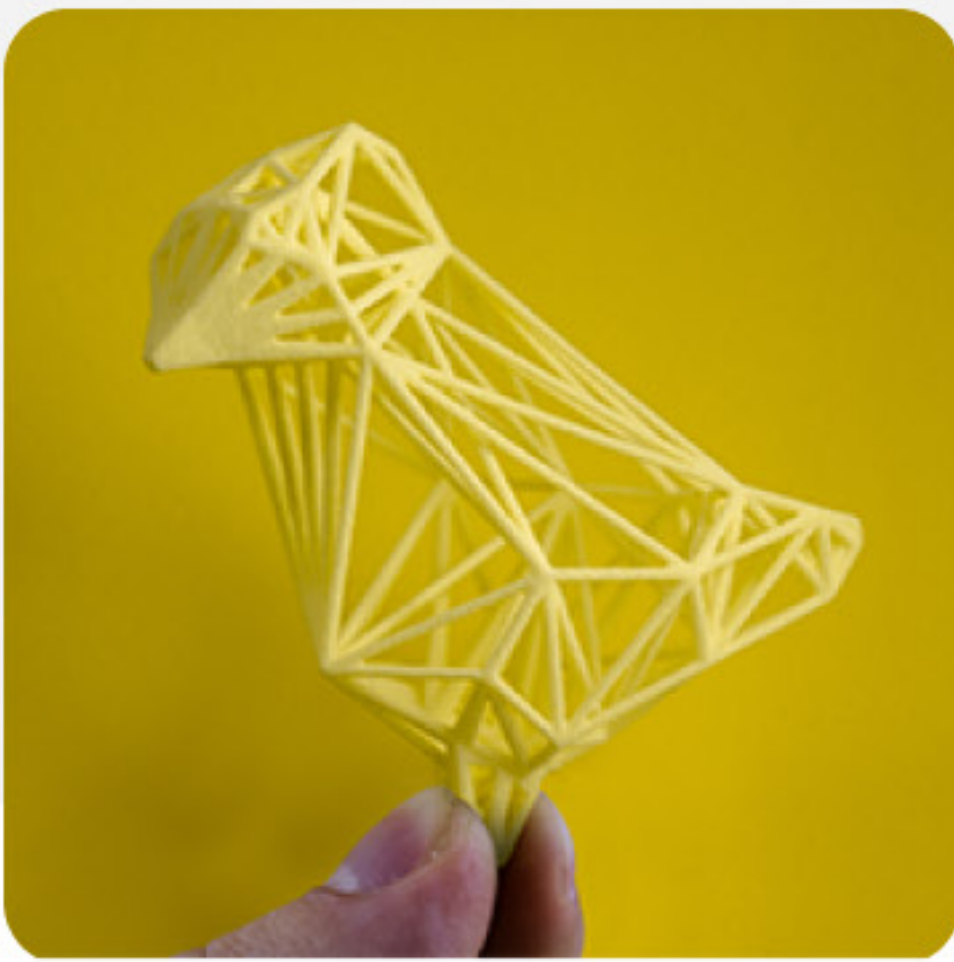

- ✓ Standard 1 week Service
- ✓ 48hr Rush Service

3d design guide & support

- ✓ Free File Analysis
- ✓ 3D File Preparation
- ✓ 3D File Repair Service

How Our 3D Printing Service Works

Our 3D printers require a 3D model as an input to generate a physical design. You can either design it yourself, find a design online or work with our talented industrial designers to bring your ideas to life. Once you have a file, here's how the process works:

1. Submit your 3D model files in .STL format along with your specifications (.OBJ and .STEP files are also acceptable). [Learn more about setting up your files.](#)

2. Get a fast quote

3. Your project is sent to production if approved, you can pick up you 3D printed project or have it shipped to your location.

Is 3D Printing Right for Me?

3D Printing or Additive Manufacturing (AM) is a series of processes in which material is joined together one layer at a time to create a three-dimensional object from a computer file. Typically, 3D printing is used by designers and engineers to create one-off or small batch quantities of a valuable part or product.

3D printing is best suited for:

- ✓ Rapid lead time manufacturing
- ✓ Prototyping & Concept Modeling
- ✓ Custom agile tooling
- ✓ Mass customization
